Subject: Biweekly report (January 29, 2021 - February 11, 2021)

Please find attached preliminary daily estimates of passage, 90% confidence intervals, and fork length ranges of unmarked juvenile salmonids sampled at Red Bluff Diversion Dam for the period January 29, 2021 through February 11, 2021. Race designation was assigned using length-at-date criteria.

Mean cumulative weekly passage of winter Chinook thru February 11 (week 6) for the last 18 years of passage data is 98.7% with one standard deviation measuring 1.5%.

**NOTE: Bi-weekly reports produced after January 28, 2021 incorporate revised passage values. Brood year 2020 winter and spring Chinook passage estimates in Table 1 and Figures 1, 2 have been revised for the period October 16 through November 17, 2020 due to genetic assignments of fish that differed from field assignments based on length-at-date criteria. These revisions affect all bi-weekly reports generated for 2020 winter and spring Chinook between October 16, 2020 and January 27, 2021. Original and revised biweekly reports can be found at: [https://www.fws.gov/redbluff/rbdd\\_biweekly\\_final.html](https://www.fws.gov/redbluff/rbdd_biweekly_final.html).**

**Rotary-trapping/juvenile fish monitoring operations at the Red Bluff Diversion Dam were suspended from March 25, 2020 to June 30, 2020, to protect employee health and safety resulting from the Coronavirus/COVID-19 global pandemic. Sampling operations resumed with the start of winter Chinook salmon brood year 2020, on July 1, 2020.**

This report also contains graphical displays of salmonid passage dating back to 2014 for comparison.

Please note that data contained in these reports is subject to revision as this data is preliminary and undergoing QA/QC procedures.

Table 1.— Preliminary estimates of passage by brood-year (BY) and run for unmarked juvenile Chinook salmon and steelhead trout captured by rotary-screw traps at Red Bluff Diversion Dam (RK391), Sacramento River, CA, for the dates listed below. Results include estimated passage, peak river discharge volume, water temperature, turbidity, and fork length (mm) range in parentheses. A dash (-) indicates that sampling was not conducted on that date.

<sup>1</sup> Peak daily discharge values do not account for diversions at RBDD and only represent peak flows registered at the Bend Bridge Gauging station (<http://cdec2.water.ca.gov/cgi-progs/queryFx?bnd>).

<sup>2</sup> Biweekly totals may be greater than the sum of the daily estimates presented in this table if sampling was not conducted on each day of the biweekly period. A dash (-) denotes those dates. To estimate daily passage for days that were not sampled, we impute missed sample days with the weekly mean value of days sampled within the week.

## Juvenile Winter Chinook Salmon Estimated Passage

Figure 1. Weekly estimated passage of unmarked juvenile winter Chinook salmon at Red Bluff Diversion Dam (RK391) by brood-year (BY). Fish were sampled using rotary-screw traps for the period July 1, 2014 to present .

\*Winter Chinook passage value reflects addition of length-at-date spring Chinook determined to be winter Chinook from genetic analysis during the period of October 16th thru November 18th during brood years 2017 thru 2020. See memos on 2018 & 2019 biweekly report pages for more info .
